

Fire Warnings

PermaTherm Architectural Insulation Panels and liners contain combustible components and may constitute a fire hazard if improperly used or installed.

PermaTherm Architectural Insulating Panels should not be left inadequately protected. Use only as directed by the specific instructions accompanying this product.

During shipping, storage, installation and use, these materials should not be exposed to open flame or ignition sources.

Sprinklers should be used with PermaTherm Architectural Insulating Panels, unless specifically approved for use without sprinklers. PermaTherm strongly recommends considering the benefit of supplementary fire detection, alarm and suppression systems.

For proper protection of PermaTherm Architectural Insulating Panels in storage, consult the National Fire Protection Association (NFPA) Standards, or contact your local fire prevention authority.
